Education

Whitman College Expected May 2027
B.A. in Computer Science; Minors in Data Science and Economics *Walla Walla, WA*

- **GPA: 3.94**
- **Coursework:** Data Structures, Algorithms, Computer Systems, Software Design, Machine Learning

Experience

Full-Stack Software Engineer Mar. 2026 – Present
Typing Agent | Contract *Remote*

- Shipped **Blizzard Defense** and reusable integrations for **11 additional games** across Typing Agent and Yeti Academy; Typing Agent serves **4,000+ schools in 32 countries**.
- Built **Node.js/Socket.IO** lobbies for **3 multiplayer games** with JWT-authenticated class isolation, reconnect handling, and persistent scores; enforced server-side Battleship rules to protect hidden boards.
- Implemented production error monitoring across **JavaScript and PHP**, combining sanitized diagnostics, release-tagged errors, and a ranked dashboard to reproduce and prioritize student failures.
- Hardened **MySQL** progress saves with receipt-based idempotency and bounded deadlock recovery; added integration regressions for concurrent submissions and lost-response retries.
- Created a shared accessibility library with screen-reader support, high contrast, English/Spanish localization, and saved preferences; integrated it across student games and curriculum screens.

Co-founder & Software Engineer Jul. 2026 – Present
LyreLink *Remote*

- Co-developed a **TypeScript, React, and Next.js** app for synchronized band sheet music, with Ably real-time updates, Redis state, and private Azure Blob storage.
- Enabled **up to 7 days of offline practice** with service workers and session-scoped PDF caching; fixed cache races so stale tabs cannot restore private files after a purge.
- Shipped customizable setlists and PDF import tools to rotate, combine, and duplicate pages; added **Vitest and Playwright** coverage for offline recovery and shared-state workflows.

Software Design & Data Science Intern Jun. 2025 – Aug. 2025
Williams Investments *Bothell, WA*

- Automated approximately **20 personalized emails/day** through the Quick Lease Pro API, saving **about 1 hour/day**; added webhook retries, backoff, structured logging, and GitHub Actions scheduling.
- Built Python ingestion and CSV-validation pipelines with Selenium; developed a lease-duration prediction model evaluated with cross-validated MAE and R^2.

Projects

Tennis Match Analytics Platform | *Python, Pandas, Plotly* 2026

- Built an analytics platform for **Whitman College's tennis program**; reconstructed point-level records from shot-level CSV data to compute match and player metrics.
- Developed interactive **Plotly dashboards** for coaches to filter by player and time window and analyze season-long performance trends.

Technical Skills

Languages: Python, Java, TypeScript, JavaScript, PHP, SQL, HTML/CSS
Frameworks & APIs: React, Next.js, Node.js, Yii2, Socket.IO, REST APIs
Data: MySQL, Redis, Pandas, NumPy, scikit-learn, Plotly
Tools & Cloud: Git, GitHub Actions (CI/CD), Playwright, Vitest, Vercel, Azure Blob Storage
